Charlie Johnson, PhD

Computational Biologist · Causal Inference & Real-World Oncology Data · 5+ years in industry

London, UK · ckjohnson817@gmail.com · github.com/USERNAME · linkedin.com/in/USERNAME

SUMMARY

Computational biologist with 5+ years of industry experience turning large-scale, multimodal real-world oncology data into biomarker and clinical-development decisions for pharma and biotech partners. Senior Translational Scientist at **Tempus AI**, working across a 300,000+ patient clinicogenomic database. Completed a **PhD at Imperial College London** alongside this role, developing a causal framework for imaging biomarker development in lung cancer (MICCAI 2026). Bridges rigorous causal and statistical methods with the pace and stakeholder demands of industry.

EXPERIENCE

Tempus AI — New York, NY / London, UK?

Senior Translational Scientist I — Sep 2025 – Present

Translational Scientist II — Feb 2023 – Sep 2025

Junior Translational Scientist — Jul 2021 – Feb 2023

- Lead analytics for 15+ pharma and biotech partners across 25+ cancer indications, turning partner goals into focused research plans that inform biomarker selection, indication expansion, and Phase 1/2 trial strategy.
- Analyse a 300,000+ patient multimodal dataset (DNA-seq, RNA-seq, EHR, claims) using survival analysis, regression, differential expression, and unsupervised machine learning.
- Develop methods to correct missing data, selection bias, and measurement bias in real-world data, turning previously unusable records into analysis-ready evidence.
- Built scalable pipelines and internal R packages used across the scientist team and set team coding standards, reducing time-to-insight [by ~X% / used by N scientists].
- Present findings to scientific and executive audiences; train new hires and client teams; run workshops as a member of the Tempus Board of Education.

Imperial College London, Department of Surgery & Cancer — London, UK

Doctoral Researcher (concurrent with full-time role at Tempus AI) — 20XX – 2026

- Developed a causal framework for imaging biomarker development for personalised lung cancer management [1 line: the method, e.g. what causal approach + what imaging data + cohort size].
- [1 line: main result or contribution, ideally with a number]; published at MICCAI 2026 and presented at EuroCIM 2026 and [AI in Healthcare 2026 full name].

Earlier experience

- **Research Analyst, Fenyö Lab, NYU Grossman School of Medicine** (Dec 2020 – Jul 2021): proteogenomic subtyping of endometrial carcinoma (ICA, WGCNA, GSEA). Co-author, *Cancer Cell* 2023.
- **Investment Banking Summer Analyst, Healthcare, BofA Merrill Lynch** (Summer 2019); received full-time offer.

EDUCATION

PhD, Clinical Medicine Research, Imperial College London — 2026

MS, Biomedical Informatics, NYU Grossman School of Medicine (GPA 3.89/4.00) — 2021

BS, Mathematics (Minor: Biology), Georgetown University — 2020

SELECTED PUBLICATIONS & PRESENTATIONS

- [Title]. *MICCAI* 2026 (paper).
- Clinicogenomic landscape of metastatic colorectal cancer patients with pathogenic *GNAS* variants and real-world outcomes on first-line oxaliplatin. *ASCO* 2025 (poster).
- Dou Y, …, **Johnson I**, …, Fenyö D. Proteogenomic insights suggest druggable pathways in endometrial carcinoma. *Cancer Cell* 2023;41(9):1586–1605.

Full list in CV.

SKILLS

Methods	Causal inference, survival analysis, real-world evidence, biomarker discovery, multi-omics integration, machine learning & deep learning, [medical image analysis?]
Languages	R (incl. package development), Python, SQL, Bash
Platforms	Google Cloud (BigQuery, GCS), AWS, dbt, Docker, Git/GitHub
